

ABSTRACT OF THE DISCLOSURE

A polymer composite molded body contains a fiber and
5 at least one sheet of fiber cloth in a polymer matrix. The
fiber cloth is disposed in the polymer composite molded
body along a surface thereof. A polymer composition
containing the fiber and polymer matrix is impregnated into
the fiber cloth. Then a magnetic field is applied to the
10 polymer composition to orient the fibers in the composition
in a direction crossing with the fiber cloth. Then the
polymer composition is solidified to obtain the polymer
composite molded body.
